Amendments to the Specification:

Please replace the paragraph beginning at page 4, line 10, with the following redlined paragraph:

The RNt notifies this fact to the PDSNt so as to set up a packet service, and under this condition, a session ID is sent to the PDSNt. The PDSNt recognizes a new R-P through the session ID (S26). <u>A PPP link to the PDSNt is established without closing the current traffic links.</u> Then the PDSNt sets up a PPP session with the MC (S27). Under this condition, a PPP certification procedure for the mobile IP is not carried out.
